Kalyana Sundaram V

Game & Tools Engineer

Bengaluru, Karnataka, India | kalyan.wired@gmail.com | linkedin.com/in/kalyana-sundaram-v-742ba731

PROFESSIONAL PROFILE

Game and tools engineer with experience leading rapid prototypes and building gameplay systems, Unity production pipelines, and native Windows and Android products. Works across Unity/C#, Cocos/TypeScript, and .NET with a focus on readable architecture, testable automation, and fast delivery.

CORE SKILLS

Unity, C#, gameplay programming, game development, developer tools, procedural generation, Unity editor tooling, .NET, WinUI 3, Cocos Creator, TypeScript, Android, Java, Git, SQLite, Firebase, Nakama, Addressables, automated testing, technical leadership

PROFESSIONAL EXPERIENCE

Independent Game & Tools Engineer | Independent | March 2026-Present

- Designs and builds gameplay prototypes, Unity content pipelines, native Windows products, and local-first Android tools.
- Owns product definition, architecture, implementation, testing, packaging, and evidence-based iteration across current independent projects.
- Available for full-time game or tools engineering roles and focused consulting engagements.

Gameplay Engineer | Qila Games | November 2024-March 2026

- Contributed gameplay and product systems for Ludo Hero in a four-developer team working with artists.
- Worked across local and network board play, turn state, kingdom progression, rewards, UI, asynchronous loading, analytics, authentication, and addressable content.
- Used Unity, C#, UniTask, Nakama, Firebase, and Addressables; public descriptions intentionally omit private implementation details.

Prototype Team Tech Lead / SDE2 | Bombay Play | September 2021-May 2023

- Led engineering delivery across 12 rapid game prototypes in collaboration with game design and art.
- Built Word Wall and seven Match10 variations that advanced into production development, including content-generation, level, pacing, controls, effects, and power-up systems.
- Supported Cube Match, Tower Clash, Card Wars, Bananagrams, Game of Life, and other prototypes while coordinating work through Agile practices and Bitbucket, Jira, and Confluence.

EARLIER EXPERIENCE

Founder / Independent Developer | Ameya Game Studio (closed, part-time independent studio) | 2016-2021

- Founded and operated a small independent game studio alongside other work, owning game design, engineering, testing, release preparation, and product iteration.
- Published King Cube for Android and built additional mobile games and a marketing application prototype for friends, family, and small-business use cases.

Game Developer | URG Infotech | March 2018-April 2019

- Independently developed Android game prototypes and recreations of casino and popular-game mechanics.
- Worked across gameplay implementation, UI, debugging, device builds, and iterative delivery.

SELECTED CURRENT PROJECTS

ProjectPulse | WinUI 3, .NET, C#, SQLite, Git, OpenAI

- Native Windows workspace that brings projects, tickets, commits, activity sessions, schedules, insights, and delivery history into one local interface.
- Includes an agent bridge, ticket/commit/activity tracking, reviewable agent handoffs, and an OpenAI-backed slice-review workflow for structured implementation feedback.

AssetForge / PackTriage | Unity, C#, PowerShell

- Processes a catalog of 427 Unity asset packs through download intake, offline package scanning, Unity deep probes, verdict assignment, and auditable reports.
- Normalizes approved assets with dependency containment, GUID preservation and rewrites, URP material conversion, export manifests, and SHA-256 integrity verification.

Ludo Demolition | Unity 6, C#

- Mobile-first 3D demolition prototype spanning contracts, tool and dice phases, destructible building parts, score, rewards, economy, and progression.
- Uses planner-driven procedural settlements, deterministic seeds, road-access validation, configuration boundaries, and automated system checks.

Money Planner | Native Android, Java 17

- Local-first Android MVP that parses recent bank and card SMS on-device into spending, EMI, debt, savings, runway, and upcoming-obligation views.
- Separates repayments from new spending, assigns parser confidence, declares no internet permission, and keeps privacy and restricted-SMS policy constraints explicit.

ADDITIONAL PRODUCTS AND SHIPPED GAMES

Wallpaper Workbench | WinUI 3, .NET, C#

- Windows image and video wallpaper product with configurable providers, strict resolution filtering, downloads, collections, rotation, fit modes, and native desktop playback.

Civitai Asset Manager | WinUI 3, .NET, C#, SQLite

- Local model-library manager for scanning, hashing, de-duplication, metadata enrichment, tags, trigger words, prompt recipes, downloads, and reversible cleanup.

Ludo Hero | Unity, C#, Nakama, Firebase, Addressables

- Team-developed mobile board game with local and network play, turn-state systems, kingdom progression, rewards, mini-games, analytics, authentication, and live-content support.

King Cube | Unity, C#, Android

- Published mobile action-puzzle game with grid movement, split-and-rejoin mechanics, laser objectives, generated level data, transforming floors, pooled hazards, feedback, and guided onboarding.

BOMBAY PLAY PROTOTYPE PORTFOLIO

Word Wall | Match10 (seven variations) | Bananagrams | Game of Life | Cube Match | Tower Clash | Card Wars

Contributions included gameplay implementation, procedural or generated content, level systems, controls, power-ups, session logic, 3D math, debugging, and prototype-to-production handoff.

EDUCATION

Bachelor of Engineering in Computer Science | Meenakshi Ramaswamy Engineering College | Affiliated with Anna University
